SUMMARY

Proven Software Development Engineer with over four years of experience specializing in C#, JavaScript, React, Unit Testing, and Accessibility. As a dedicated lifelong learner, I attended a 500+ hour coding boot camp where I learned industry best practices and application architecture. After self-teaching and freelance work, I joined Launch Consulting Group as a Software Development Engineer, where I gained skills in C#, Azure Technologies, Data Analysis, and Test-Driven Development.

SKILLS

- **Languages:** C#, Javascript, Typescript, SQL, HTML, CSS, Python, Java
- **Libraries:** React, Redux, .NET, ASP.NET
- **Databases:** MySQL, PostgreSQL, MongoDB, CosmosDB, SQL Server, Snowflake
- **Testing:** Mocha, Chai, NUnit, Jest, Selenium
- **CI/CD:** Azure, Azure DevOps, Github Actions, Docker
- **Other:** Express.js, NodeJS, Linux, Azure Synapse, Azure Data Factory, Databricks, PySpark, OpenAI

EXPERIENCE

Launch Consulting Group - Software Development Engineer

Remote Dec 2022 - Sep 2026

- Developed on a team working for a Fortune 500 tech company on a wide array of applications and data reports in a Scrum environment using Azure to expand and refine features while communicating progress and ideas with our stakeholders.
- Became cross-trained and proficient with Azure Technologies, including Databricks, Data Factory, DevOps, Pipelines, Application Insights, App Services, Functions, ARM Templates, Bicep, and more.
- Single-handedly recreated an outdated production sales application using React and C#/.NET, improving functionality, reducing bugs, and speeding up the average load time for the application by 35 times.
- Leveraged Power Automate to synchronize work items across multiple projects, then analyzed feedback work items with AI using Microsoft Fabric notebooks with Python/PySpark, finally, displaying the analyzed data inside a Power BI report.
- Collaborated on a 20+ person team to continue development on the React frontend of a large-scale production bidding and management application for a large construction company with over 1,000 gigs to track.
- Resolved 300+ accessibility and localization bugs across 4 different projects using React in a push to help other teams increase productivity on feature work.
- Owned the support and development of three production APIs using the latest Microsoft AI frameworks for C# (.NET) and Python to analyze, validate, summarize, and even schedule meetings from unstructured documents.
- Reduced AI related expenses by ~45% across .NET and Python APIs by optimizing internal code and deploying more suitable AI models, these changes also improved the output quality boosting the success rate from ~92% to ~98.5%.

Clearviction - Software Developer

Remote Jun 2022 - Dec 2022

- Implemented 10+ new features and developed 25+ solutions to existing issues within our React web application within the first month of being on this volunteer team.
- Contributed alongside over 15 people to perform asynchronous work while maintaining clear communication and expectations using an Agile Kanban process.

PROJECTS

Petrichor Coffee

Remote Mar 2022 - May 2022

- Created a React web application that interacts with the backend and database to provide a consumer coffee distribution website that is responsive to different screen sizes with a clean and UX friendly UI.
- Addressed authentication and security concerns with JWTs and the Bcrypt library.
- Deployed to the cloud using a CI/CD pipeline that builds in under 5 minutes, hosted on Render.

EDUCATION

Codecademy - Full Stack Engineering

Remote Mar 2020 - Sep 2021

- Became proficient in practical software development standards focused on HTML5, CSS3, JavaScript, React, and Redux on the frontend, NodeJS, ExpressJS, SQL, Postgres, algorithms, and data structures on the backend.
- Created and deployed mobile-first applications while learning new languages and frameworks.
- Developed organized projects to support and implement my knowledge to exceed requirements without overengineering, following the KISS design principle.
